

Dr. Stephanie Albin

AAAS Fellow

Directorate for Mathematical & Physical Sciences

Division of Chemistry

Class of 2015-16

Stephanie Albin is a 2015-16 AAAS Science & Technology Policy Fellow in the Division of Chemistry. Her background is in neuroscience, where she took an interdisciplinary approach combining behavioral neuroscience with cell and molecular biology. After receiving her Ph.D. in neuroscience from the University of California, San Francisco, Stephanie moved to Northern Virginia where she worked as a post-doctoral researcher at the HHMI Janelia Research Campus. Her research used *Drosophila* as a model system to investigate the neural circuit mechanisms that are responsible for regulating hunger state and the effects of hunger on behavior. She is also interested in science outreach, in particular with K-12 students. In her spare time, Stephanie is a Girl Scout troop leader, enjoys cooking, and has a newfound love of Lego.
